# Formly Team - Interview Z

This document records the team's interview with anonymized participant Z. Responses are lightly edited for spelling and clarity from the interview notes.

Behavior tags describe actions Z reported. Opinion tags describe Z's judgments or preferences. Both come from Z's account, not direct observation.

### 1. Screen (1 minute)

**Interviewer:** What do you currently use to help you check or improve your exercise form?

**Z - Behavior:** Z reported using the Nike Training Club app for workout instructions and exercise demonstrations, to learn correct movements and understand which muscles they should be working.

**Z - Opinion:** Z said the app helps them feel more confident when trying new exercises.

### 2. Last time story (4 minutes)

**Interviewer:** Can you walk me through the last time you checked whether you were doing an exercise correctly?

**Z - Behavior:** During a squat workout, Z was unsure about their technique, opened Nike Training Club, searched for the split squat, and watched the demonstration. Z repeated the demonstration a couple of times, then tried the exercise again while following the instructions as closely as possible.

**Z - Opinion:** Z said the instructions were clear, but they were still not completely sure whether they were performing the exercise correctly because the app showed how the movement should look without giving personalized feedback. Z wished the app could analyze their movements and tell them what they were doing wrong.

### 3. Alternatives (3 minutes)

**Interviewer:** What other methods have you tried to check your form, and why did you stop using them?

**Z - Behavior:** Z reported trying exercise demonstrations, workout guides, and step-by-step instructions within fitness apps. Z has not completely stopped using other fitness resources.

**Z - Opinion:** Z found demonstrations helpful because they could be watched whenever needed, but said the instructions were sometimes not detailed enough to confirm the movement was correct. Z prefers Nike Training Club because it organizes workouts and makes instructions easy to access, and would prefer one app that guides them through exercises and gives personalized feedback on technique.

### 4. Switching story (4 minutes)

**Interviewer:** What made you start using Nike Training Club? Are you still using it? If not, why?

**Z - Behavior:** Z started using Nike Training Club to get in better shape and follow a structured workout routine, since they were not familiar with many exercises at first. Z is still using the app to stay consistent with their fitness goals.

**Z - Opinion:** Z liked that the app offered workout plans and demonstrations to follow at their own pace and made it easier to stay organized. Z said they sometimes struggle to know whether they are performing exercises correctly, and would be interested in an app that analyzes form through the phone's camera so they could learn exercises and receive feedback in one place.

### 5. Money and time (2 minutes)

**Interviewer:** How much time or money have you actually spent on checking or improving your form recently?

**Z - Behavior:** Z estimated spending about two to three hours a week using Nike Training Club, reviewing demonstrations, and following workout instructions. Z reported not spending much money specifically on improving their form.

**Z - Opinion:** Z likes fitness apps because they are convenient and support exercising independently, and said they would try an affordable app that gives personalized feedback instead of paying for a personal trainer.

### 6. Close (1 minute)

**Interviewer:** Is there someone you know who has tried a similar method or something different?

**Z - Secondhand report:** Z said a friend works with a personal trainer who helps choose exercises, corrects form, and explains how to perform movements safely. This was not independently verified.

**Z - Opinion:** Z thought the friend seems more confident because they can ask questions and get immediate feedback. Z believes fitness apps are useful for learning exercises and following routines, but trainers give more individualized guidance, and that apps offering personalized feedback could help people improve their form without paying for regular training sessions.
